

Table 1. Number, incidence rate ¹, median days away from work ² and relative standard errors ³ of occupational injuries and illnesses involving days away from work ⁴ by selected natures with musculoskeletal disorders ⁵ in selected ownerships for New York, 2004

Ownership	Nature of the injury or illness	Total Cases	Incidence Rate	Median Days	Relative Standard Error
Private industry	All Natures	27,000	48.0	13	3.4
Local government	All Natures	7,250	108.6	7	2.7
State government	All Natures	2,250	120.0	11	5.2
Private industry	021 Sprains- strains- tears	18,450	32.8	11	3.6
Private industry	0972 Back pain- hurt back	3,990	7.1	13	5.1
Private industry	0973 Soreness- pain- hurt- except the back	2,620	4.6	12	5.9
Private industry	1241 Carpal tunnel syndrome	550	1.0	43	11.5
Private industry	153 Hernia	800	1.4	40	9.6
Private industry	1530 Hernia- unspecified	320	0.6	32	14.8
Private industry	1531 Inguinal hernia	210	0.4	47	18.0
Private industry	1532 Hiatal hernia	70	0.1	180	30.8
Private industry	1533 Ventral hernia	60	0.1	9	32.8
Private industry	1539 Hernia- n.e.c.	140	0.2	180	22.2
Private industry	17 Musculoskeletal system and connective tissue disea	590	1.0	7	11.1
Private industry	172 Dorsopathies	170	0.3	2	19.9
Private industry	1729 Dorsopathies- n.e.c.	160	0.3	2	20.7
Private industry	173 Rheumatism- except the back	410	0.7	13	13.1
Private industry	1733 Tendonitis	290	0.5	12	15.4
Private industry	1739 Rheumatism- except the back- n.e.c.	80	0.1	56	29.5
Local government	021 Sprains- strains- tears	5,210	78.0	7	3.2
Local government	0972 Back pain- hurt back	1,040	15.5	6	7.5
Local government	0973 Soreness- pain- hurt- except the back	830	12.4	6	8.3
Local government	1241 Carpal tunnel syndrome	70	1.0	27	29.6
Local government	153 Hernia	60	0.9	32	30.5
Local government	1530 Hernia- unspecified	20	0.3	28	59.0
Local government	1531 Inguinal hernia	20	0.3	35	54.4
Local government	17 Musculoskeletal system and connective tissue disea	50	0.7	6	35.3
Local government	1733 Tendonitis	20	0.3	6	59.1
State government	021 Sprains- strains- tears	1,430	76.6	11	6.0

Table 1. Number, incidence rate ¹, median days away from work ² and relative standard errors ³ of occupational injuries and illnesses involving days away from work ⁴ by selected natures with musculoskeletal disorders ⁵ in selected ownerships for New York, 2004 -- Continued

Ownership	Nature of the injury or illness	Total Cases	Incidence Rate	Median Days	Relative Standard Error
State government	0972 Back pain- hurt back	430	23.2	11	9.6
State government	0973 Soreness- pain- hurt- except the back	300	16.1	12	11.3
State government	1241 Carpal tunnel syndrome	30	1.7	11	33.0
State government	153 Hernia	30	1.8	109	32.7

¹ Incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as:
 $(N / EH) \times 20,000,000$ where,

N = number of injuries and illnesses,
 EH = total hours worked by all employees during the calendar year,
 20,000,000 = base for 10,000 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

² Median days away from work is the measure used to summarize the varying lengths of absences from work among the cases with days away from work. Half the cases involved more days and half involved less days than a specified median. Median days away from work are represented in actual values.

³ Relative standard errors are a measure of the sampling error of an estimate. Sampling errors occur because observations are made on a sample, not on the entire population. Estimates based on the different possible samples of the same size and sample design could differ. Relative standard errors less than 0.05 are not shown.

⁴ Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction.

⁵ Includes cases where the nature of injury is: sprains, strains, tears; back pain, hurt back; soreness, pain, hurt, except back; carpal tunnel syndrome; hernia; or musculoskeletal system and connective tissue diseases and disorders and when the event or exposure leading to the injury or illness is: bodily reaction/bending, climbing, crawling, reaching, twisting; overexertion; or repetition. Cases of Raynaud's phenomenon, tarsal tunnel syndrome, and herniated spinal discs are not included. Although these cases may be considered MSD's, the survey classifies these cases in categories that also include non-MSD cases.

NOTE: Dashes indicate data that do not meet publication guidelines or data for incidence rates less than .05 per 10,000 full-time workers. The scientifically selected probability sample used was one of many possible samples, each of which could have produced different estimates. A measure of sampling variability for each estimate is available upon request.
